## CONTENTS

- 1x Bracket & 2x Screws
- Black Pipe and Joiner
- Elbow
- Clear Tubing
- Cable Ties

## TOOLS REQUIRED

A. Drill

B. Phillips Screwdriver

## INSTRUCTIONS

**Note:** When doing any maintenance on pump this must all be recorded on the Pre-Treatment Compliance Record.

Item	Reason	Instruction
Bracket 	For easy access to pump so it can be removed off wall	Replace or install onto wall using the 2 screws.
Black pipe and Joiner 	To ensure all product is administered so tube doesn't rise above liquid in bottle	Replace or install into clear tubing coming through cap of bottle.
Elbow 	To ensure tube is connected to grease converter	Screw elbow into side of grease converter and push clear tubing into black ring at other end of elbow. To release tube from elbow push black ring in and pull tube out.
Clear Tubing 	To get fluid from bottle into grease converter or drain	- Cut tubing in half push one end into grey tube left side of pump head, with other end push through hole in cap of 5 litre bottle and push into joiner with black pipe connected. - Other half of tube push one end into grey tube right side of pump head other end of tubing push into black ring on elbow into grease converter.
